OPC UA Workshop   27.-28.10.2010, Espoo Finland

OPC UA (Unified Architecture) specification builds up a completely new communication protocol, which replaces its very successful predecessor OPC.

This training gives software developers and experts the keys to successful OPC UA development.

Students will learn to
- Create a UA Server address space
- Connect a UA Client and navigate through the Server address space to find information
- Reading and writing of data
- Creation of subscriptions to monitor data changes and events
- Using UA methods

- Programming languages and SDKs covered:
    - C++ / Unified Automation OPCUA C++ SDK (main target of exercises)
    - Java / Prosys OPC UA Java SDK
    - C# / OPC Foundation OPC UA .NET SDK

Rough schedule:

- Day 1
    - Introduction to OPCUA concepts
    - OPCUA Client development
- Day 2
    - OPCUA Server Development

Participants need to bring their own laptops, which should include Windows XP/Vista/7 and MS Visual Studio 2005/2008/2010 (Eclipse/NetBeans for Java development).

Training languages are English and Finnish.
